OBJECTIVE

CSE undergraduate building fullstack, cloud deployed applications with interactive dashboard UIs, real-time data pipelines, and relational + NoSQL data design from a rolebased clinical dashboard to a 27 bank financial parsing engine to a real time computer vision monitoring system.

EDUCATION

Sathyabama Institute of Science and Technology, B.E. Computer Science Engineering specialized with (Blockchain Technology), CGPA: 7.82	Tamil Nadu 2023 – 2027
SRV Innovative Public School, Higher Secondary Schooling (PCM with Computer Science), 66.8%	Rasipuram, Tamil Nadu 2023

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, HTML, CSS, Solidity.
Data Structures & Algorithms: 120+ problems solved LeetCode – Dynamic Programming, Graph Traversal (DFS/BFS), Hash Tables.
Databases: MongoDB (NoSQL), SQLite, DBMS
Frontend: React, Dashboard & Data Visualization Design, Responsive UI, Flask.
Cloud & Platform: Cloud Deployment (AWS EC2/NACL, Vercel), REST API Design, Git/GitHub.
Engineering Practices: SDLC, Unit & Integration Testing, Debugging, Code Reviews, Agile methodologies.

PROJECTS

- GeoFence** | [Live](#) | [GitHub](#) Mar 2026
- Built a real-time multi-zone object detection system (FastAPI, OpenCV, YOLOv8) flagging 9 object types at 14.3 FPS with CLAHE low-light preprocessing. Designed a multi-camera dashboard (Firebase Auth) with live zone config, object tracking, and cooldowns that cut false alerts to near-zero.
 - **Technologies:** Python, FastAPI, OpenCV, YOLOv8, Firebase
- ChronoCare AI** | [GitHub](#) Mar 2026
- Built a full-stack health risk platform (React/Vite, Flask) with 4 ML models (RF/XGBoost) achieving 97.27% accuracy on diabetes prediction. Designed a role-based Doctor/Patient dashboard (JWT) with an OCR intake pipeline unifying PDF/Excel/CSV records, validated by an 80/80 test suite.
 - **Technologies:** React, Flask, Scikit-learn, XGBoost, JWT
- KC Tracker** | [Setup](#) | [GitHub](#) Feb 2026
- Built a full-stack finance tracker (Flask, SQLite) parsing 27 Indian bank statement formats, validated on 2,000+ transactions with an 87/87 test suite. Designed the transaction UI/UX and a 6-field, 5-signal deduplication algorithm to flag ambiguous records.
 - **Technologies:** Python, Flask, SQLite, Pandas

CERTIFICATIONS

- Software Engineer Intern – HackerRank
- SQL (Advanced) – HackerRank
- Combining Machine Learning and Rules for Cybersecurity – IBM
- Cloud Infrastructure AI Foundations Associate – Oracle
